

# THE PHILOSOPHICAL MAGAZINE

EDITOR

PROFESSOR N. F. MOTT, M.A., D.Sc., F.R.S.

EDITORIAL BOARD

SIR LAWRENCE BRAGG, O.B.E., M.C., M.A., D.Sc., F.R.S.

SIR GEORGE THOMSON, M.A., D.Sc., F.R.S.

PROFESSOR A. M. TYNDALL, C.B.E., D.Sc., F.R.S.

---

VOL. XLIII.—SEVENTH SERIES

JANUARY—DECEMBER 1952

---

LONDON:

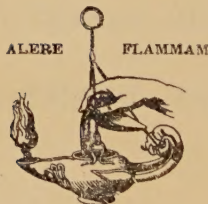

TAYLOR & FRANCIS, LTD., RED LION COURT, FLEET STREET, E.C. 4.

“Meditationis est perscrutari occulta; contemplationis est admirari perspicua . . . Admiratio generat quæstionem, quæstio investigationem, investigatio inventionem.”—*Hugo de S. Victore.*

---

—“Cur spirent venti, cur terra dehiscat,  
Cur mare turgescat, pelago cur tantus amaror,  
Cur caput obscura Phœbus furrugine condât,  
Quid toties diros cogat flagrare cometas,  
Quid pariat nubes, veniant cur fulmina cœlo,  
Quo micet igne Iris, superos quis conciat orbes  
Tam vario motu.”

*J. B. Pinelli ad Mazonium.*

NUMBER 336—JANUARY

|                                                                                                                                                                                               | Page |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| I. Theory of Radio Reflections from Meteor Trails: I. By T. R. KAISER and R. L. CLOSS, Jodrell Bank Experimental Station, University of Manchester.....                                       | 1    |
| II. An Equation for a Particle with Two Mass States and Positive Charge Density. By H. J. BHABHA, F.R.S., Tata Institute of Fundamental Research, Bombay, India.....                          | 33   |
| III. Second Sound and the Thermo-Mechanical Effect at very low Temperatures. By J. C. WARD and J. WILKS, Clarendon Laboratory, Oxford.....                                                    | 48   |
| IV. Space Charge Smoothing of Microwave Shot Noise in Electron Beams. By F. N. H. ROBINSON, Clarendon Laboratory, Oxford.....                                                                 | 51   |
| V. The Coulomb Scattering of Charged Particles in Nuclear Emulsions. By W. BOSLEY and H. MUIRHEAD, Department of Natural Philosophy, University of Glasgow.....                               | 63   |
| VI. The Growth of Cadmium Iodide Crystals: I—Dislocations and Spiral Growth. By A. J. FORTY, H. H. WILLS Physical Laboratory, University of Bristol.....                                      | 72   |
| VII. The Natural Radioactivity of Rubidium. By S. C. CURRAN, D. DIXON and H. W. WILSON, Department of Natural Philosophy, The University, Glasgow, W.2.....                                   | 82   |
| VIII. The Prediction of Uranium Deformation Textures. By E. A. CALNAN and C. J. B. CLEWS, National Physical Laboratory.....                                                                   | 93   |
| IX. A Calculation of the Elastic Shear Constants of $\beta$ -brass. By H. JONES, Department of Mathematics, Imperial College, London.....                                                     | 105  |
| X. Quantitative Measurement of Preferred Orientation in Rolled Uranium Bars. By G. B. HARRIS.....                                                                                             | 113  |
| XI. Correspondence:—                                                                                                                                                                          |      |
| Metallic Conduction—The Internal Size Effect. An Addendum. By D. K. C. MACDONALD, The Clarendon Laboratory, Oxford.....                                                                       | 124  |
| The Moving Griffiths Crack. By C. J. TRANTER, Military College of Science, Shrivenham.....                                                                                                    | 125  |
| High-energy Components of the $\beta$ -particle Spectrum of $\text{MsTh}_2$ . By C. G. CAMPBELL, W. J. HENDERSON and J. KYLES, Department of Natural Philosophy, University of Edinburgh..... | 126  |
| A Note on the Statistics of the Weiss Field. By G. M. BELL, The Clarendon Laboratory, Oxford.....                                                                                             | 127  |
| The Angular Distribution of Protons in the Photo-Disintegration of the Deuteron. By K. PHILLIPS, High Voltage Research Laboratory, Metropolitan-Vickers Electrical Company.....               | 129  |
| A Theorem involving Binding Energies in Relation to $\beta$ -disintegration. By N. FEATHER, F.R.S., The University, Edinburgh.....                                                            | 133  |
| XII. Notices of New Books and Periodicals received:—                                                                                                                                          |      |
| R. M. BOZORTH's Ferromagnetism.....                                                                                                                                                           | 136  |
| N. F. M. HENRY, H. LIPSON and W. A. WOOSTER's The Interpretation of X-Ray Diffraction Photographs.....                                                                                        | 136  |

## NUMBER 337—FEBRUARY

|                                                                                                                                                                                             | Page |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| XIII. Extra-Galactic Radio-Frequency Radiation. By R. HANBURY BROWN and C. HAZARD, Jodrell Bank Experimental Station, University of Manchester .....                                        | 137  |
| XIV. The Distribution of Electrons Round Impurities in Monovalent Metals. By J. FRIEDEL, H. H. Wills Physical Laboratory, University of Bristol .....                                       | 153  |
| XV. Some Features of Nuclear Disintegrations Caused by Cosmic Rays. By P. E. HODGSON, Imperial College of Science and Technology, London. ....                                              | 190  |
| XVI. The Non-Hookean Interaction of a Dislocation with a Lattice Inhomogeneity. By M. A. JASWON and A. J. E. FOREMAN, Department of Mathematics, Imperial College, London, S.W.7 .....      | 201  |
| XVII. The Application of Proportional $\gamma$ -ray Counters to the Determination of the Decay Scheme of $I^{131}$ . By P. E. CAVANAGH, Atomic Energy Research Establishment, Harwell ..... | 221  |
| XVIII. The Interaction of Fast $\pi$ -Mesons with Nuclei. By W. O. LOCK and G. YEKUTIELI, H. H. Wills Physical Laboratory, University of Bristol .....                                      | 231  |
| XIX. A Scintillation Spectrometer for High-Energy Gamma-Rays. By SVEN A. E. JOHANSSON, Department of Physics, University of Lund, Sweden .....                                              | 249  |
| XX. Correspondence :—                                                                                                                                                                       |      |
| Some Observations on Slip Lines in Iron. By H. W. PAXTON, M. A. ADAMS and T. B. MASSALSKI, University of Birmingham .....                                                                   | 257  |
| An Attempt to Produce a Thermo-Nuclear Reaction in Deuterium by Means of a High Current Spark Discharge. By P. REYNOLDS and J. D. CRAGGS, University of Liverpool .....                     | 258  |
| Film Transfer in Helium II below $1^\circ$ K. By E. AMBLER and N. KURTI, Clarendon Laboratory, Oxford.....                                                                                  | 260  |
| Fine Structure in the U238 Decay. By BARBARA ZAJAC, with Appendix by N. MILLER, Department of Natural Philosophy, University of Edinburgh.....                                              | 264  |
| Obituary. ALLAN FERGUSON, 1880–1951: an Appreciation by H. R. ROBINSON .....                                                                                                                | 267  |

## NUMBER 338—MARCH

|                                                                                                                                                                                             |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| XXI. Magnetic Hysteresis in Superconducting Colloids. By A. B. PIPPARD, Royal Society Mond Laboratory, Cambridge.....                                                                       | 273 |
| XXII. The Angular Distribution of Neutrons produced in Beryllium by 170 mev Protons. By M. SNOWDEN, Atomic Energy Research Establishment, Harwell.....                                      | 285 |
| XXIII. The Dependence of Photographic Sensitivity on Temperature. By G. C. FARNELL, Research Laboratories, Kodak Ltd., Wealdstone, Harrow, Middlesex.....                                   | 289 |
| XXIV. Note on the Angular Distribution of Radiation from Fairly Thin Targets Bombarded by High Energy Electrons. By J. D. LAWSON, Atomic Energy Research Establishment, Harwell, Berks..... | 306 |

|                                                                                                                                                                                                | Page |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| XXV. The Specific Heats of Germanium and Grey Tin at Low Temperatures. By R. W. HILL and D. H. PARKINSON, Clarendon Laboratory, Oxford.....                                                    | 309  |
| XXVI. The Relation between Thermo-Optic and Piezo-Optic Phenomena in Crystals. By G. N. RAMACHANDRAN and T. RADHAKRISHNAN, Department of Physics, Indian Institute of Science, Bangalore ..... | 317  |
| XXVII. A Calculation of the Cohesive Energies and Pressure/Volume Relations of the Divalent Metals. By S. RAIMES, Department of Mathematics, Imperial College, London.....                     | 327  |
| XXVIII. The Electronic Structure of Diamond. By G. G. HALL, Department of Theoretical Chemistry, University of Cambridge.....                                                                  | 338  |
| XXIX. Separation of the Boundary Layer at a Slightly Blunt Leading Edge in Supersonic Flow. By O. BARDSLEY and W. A. MAIR, Fluid Motion Laboratory, University of Manchester .....             | 344  |
| XXX. A Note on Estimating Yield-Point Loads in a Plastic-Rigid Body. By R. HILL, Department of Theoretical Mechanics, University of Bristol.....                                               | 353  |
| XXXI. On Photometry in Thick Nuclear Emulsions. By M. CECCARELLI and G. T. ZORN, H. H. Wills Physical Laboratory, University of Bristol.....                                                   | 356  |
| XXXII. The Low Energy Beta-Ray Spectrum of $^{170}\text{Tm}$ . By R. RICHMOND and H. ROSE, Cavendish Laboratory, Cambridge.....                                                                | 367  |
| XXXIII. Correspondence :—                                                                                                                                                                      |      |
| Anomalous Paramagnetism and Exchange Interaction in Copper Acetate. By B. BLEANEY and K. D. BOWERS, Clarendon Laboratory, Oxford.....                                                          | 372  |
| The L Absorption Spectrum of Nickel. An Anomaly. By Y. CAUCHOIS, Laboratoire de Chimie Physique, Paris.....                                                                                    | 375  |
| XXXIV. Notices of New Books and Periodicals received :—                                                                                                                                        |      |
| G. Joos's Theoretical Physics.....                                                                                                                                                             | 376  |
| Ferromagnetisme et Antiferromagnetisme.....                                                                                                                                                    | 376  |
| L. F. BATES's Modern Magnetism.....                                                                                                                                                            | 376  |
| M. V. WILKES, D. J. WHEELER and S. GILL's The Preparation of Programs for an Electronic Digital Computer.....                                                                                  | 376  |

---

## NUMBER 339—APRIL

|                                                                                                                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| XXXV. The Growth of Cadmium Iodide Crystals: II—A Study of the Heights of Growth Steps on Cadmium Iodide. By A. J. FORTY, H. H. Wills Physical Laboratory, University of Bristol.....               | 377 |
| XXXVI. The Waveforms of Atmospheric. By P. G. F. CATON and E. T. PIERCE, Cavendish Laboratory, Cambridge .....                                                                                      | 393 |
| XXXVII. Interferometric Studies of Hardness Test Indentations: Investigations on Tungsten Carbide, Steel, Duraluminium and Tin. By S. TOLANSKY and D. G. NICKOLS, Royal Holloway College, Egham.... | 410 |
| XXXVIII. Twin Formation in Cadmium. By N. THOMPSON and D. J. MILLARD, H. H. Wills Physical Laboratory, University of Bristol..                                                                      | 422 |
| XXXIX. Further Observations of Growth Patterns on Silicon Carbide (Si-C) Crystals. By AJIT RAM VERMA, Royal Holloway College, University of London .....                                            | 441 |

|                                                                                                                                                                                                                                                                                                                     | Page |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| XL. The Origin of Cosmic Rays in Solar or Stellar Disturbances. By L. RIDDIFORD, Physics Department and S. T. BUTLER, Mathematical Physics Department, University of Birmingham . . . . .                                                                                                                           | 447  |
| XLI. The Photodisintegration of the Deuteron, and the Measurement of $\gamma$ -Ray Energies with Photographic Emulsions containing Heavy Water. By W. M. GIBSON, H. H. WILLS Physical Laboratory, University of Bristol and T. GROTDAL, J. J. ORLIN and B. TRUMPY, Fysisk Institutt, University of Bergen . . . . . | 457  |
| XLII. Electron-Electron Interaction in Heavy Atoms. By G. E. BROWN, Department of Mathematical Physics, University of Birmingham . . . . .                                                                                                                                                                          | 467  |
| XLIII. Correspondence :—                                                                                                                                                                                                                                                                                            |      |
| The Double Star Effect in Nuclear Emulsion Plates Exposed to the Cosmic Rays. By G. DAVIS, Imperial College, London . . . . .                                                                                                                                                                                       | 472  |
| The Internal Pressure of Solids. By R. O. DAVIES, Queen Mary College, University of London . . . . .                                                                                                                                                                                                                | 473  |
| Electrostatic Contribution to the Elastic Constants of Solids with a Diamond Structure. By E. P. WOHLFARTH, Department of Mathematics, Imperial College, London . . . . .                                                                                                                                           | 474  |
| The $\alpha$ -activities of the Two 'Long-lived' States of $^{211}_{84}\text{Po}$ . By N. FEATHER, F.R.S., The University, Edinburgh . . . . .                                                                                                                                                                      | 476  |
| Experiments on the Electrical Resistivity of Metals. By D. K. C. MACDONALD, National Research Council, Ottawa . . . . .                                                                                                                                                                                             | 479  |
| Growth Spirals on Magnesium Crystals. By A. J. FORTY, H. H. WILLS Physical Laboratory, University of Bristol . . . . .                                                                                                                                                                                              | 481  |
| XLIV. Notices of New Books and Periodicals received :—                                                                                                                                                                                                                                                              |      |
| H. GOLDSTEIN'S Classical Mechanics . . . . .                                                                                                                                                                                                                                                                        | 484  |
| Prof. C. HINSHLEWOOD'S The Structure of Physical Chemistry . . . . .                                                                                                                                                                                                                                                | 484  |

## NUMBER 340—MAY

|                                                                                                                                                                                             |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| XLV. Angular Distribution in (d, p) and (d, n) Reactions. By A. B. BHATIA, KUN HUANG, R. HUBY and H. C. NEWNS, Department of Theoretical Physics, University of Liverpool . . . . .         | 485 |
| XLVI. On the Inhibition of Convection by a Magnetic Field. By S. CHANDRASEKHAR, F.R.S., Yerkes Observatory, University of Chicago . . . . .                                                 | 501 |
| XLVII. Grain Density in Tracks of Electrons Moving at Relativistic Velocities in Photographic Emulsions. By A. H. MORRISH, H. H. WILLS Physical Laboratory, University of Bristol . . . . . | 533 |
| XLVIII. The Origin of Glaupert's Superposition Fringes. By S. C. HUNTER and F. R. N. NABARRO, Department of Metallurgy, University of Birmingham . . . . .                                  | 538 |
| XLIX. An Unusual Birefringence Interference Pattern. By S. TOLANSKY and F. S. A. SULTAN, Royal Holloway College, Egham . . . . .                                                            | 547 |
| L. On the Significance of the Limit Load Theorems for an Elastic-plastic Body. By E. H. LEE, Graduate Division of Applied Mathematics, Brown University, U.S.A. . . . .                     | 549 |
| LI. Growth Spirals Originating from Screw Dislocations on Gold Crystals. By S. AMELINCKX, Geological Institute, University of Ghent . . . . .                                               | 562 |

|                                                                                                                                                                                                                                                             | Page |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| LII. Experiments on Two-dimensional Supersonic Flow in Corners and over Concave Surfaces. By N. H. JOHANNESSEN, Fluid Motion Laboratory, University of Manchester.....                                                                                      | 568  |
| LIII. The Spatial Correlation of Electrons in Atoms and Molecules: I. Helium and Similar Two Electron Systems in their Ground States. By SIR JOHN LENNARD-JONES, F.R.S., and J. A. POPLE, Department of Theoretical Chemistry, University of Cambridge..... | 581  |
| LIV. Correspondence:—                                                                                                                                                                                                                                       |      |
| A New Nuclear-Research Emulsion. By A. J. HERZ, Imperial College, London, S.W.7, and C. WALLER, Ilford Ltd., Ilford, Essex .....                                                                                                                            | 592  |
| LV. Notices of New Books and Periodicals received:—                                                                                                                                                                                                         |      |
| PAUL S. DWYER's Linear Computation.....                                                                                                                                                                                                                     | 595  |
| S. WHITEHEAD's Dielectric Breakdown of Solids.....                                                                                                                                                                                                          | 595  |
| J. M. BLJVOET, N. H. KOLKMEIJER and C. H. MACGILLAVRY's X-Ray Analysis of Crystals.....                                                                                                                                                                     | 596  |

## NUMBER 341—JUNE

|                                                                                                                                                                                                                                                                                                    |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| LVI. The Properties of Charged V-particles. By R. ARMENTEROS, K. H. BARKER, C. C. BUTLER, A. CACHON and C. M. YORK, The Physical Laboratories, University of Manchester.....                                                                                                                       | 597 |
| LVII. The Effect of Four Transition Metals on the $\alpha/\beta$ Brass Type of Equilibrium. By J. B. HAWORTH and W. HUME-ROTHERY, Inorganic Chemistry Laboratory, Oxford.....                                                                                                                      | 613 |
| LVIII. The Angular Distributions of the Gamma Rays in the Reaction $^{19}\text{F}(\text{p}, \alpha\gamma)^{16}\text{O}$ . By J. E. SANDERS, Cavendish Laboratory, Cambridge....                                                                                                                    | 630 |
| LIX. Elementary Structure and Slip Band Formation in Aluminium. By D. KUHLMANN-WILSDORF, Department of Physics, University of the Witwatersrand, Johannesburg and J. H. VAN DER MERWE and H. WILSDORF, National Physical Laboratory, Council for Scientific and Industrial Research, Pretoria..... | 632 |
| LX. The Formation of Immobile Dislocations during Slip. By A. H. COTTRELL, Department of Metallurgy, University of Birmingham.....                                                                                                                                                                 | 645 |
| LXI. The Determination of the Internal Conversion Coefficient and Branching Ratio for the 80 kev $\gamma$ -ray Emitted by $\text{I}^{131}$ by Means of X-ray- $\gamma$ -ray Coincidence Measurements. By PATRICK E. CAVANAGH, Atomic Energy Research Establishment, Harwell.....                   | 648 |
| LXII. A Source of Plane-polarized Gamma-rays of Variable Energy above 5.5 mev. By D. H. WILKINSON, Cavendish Laboratory, Cambridge                                                                                                                                                                 | 659 |
| LXIII. Some Hydrodynamical Aspects of the Swimming of Snakes and Eels. By G. E. GADD, National Physical Laboratory.....                                                                                                                                                                            | 663 |
| LXIV. The Scattering of Positrons. By N. CUSACK, Department of Physics, Birkbeck College, University of London.....                                                                                                                                                                                | 671 |
| LXV. An Electron-Microscope Study of the Effect of Temperature and Strain-rate on the Mechanism of Deformation of Aluminium. By R. I. GARROD, Defence Research Laboratories, Melbourne, Australia, and J. W. SUITER and W. A. WOOD, Baillieu Laboratory, University of Melbourne .....             | 677 |
| LXVI. Correspondence:—                                                                                                                                                                                                                                                                             |     |
| The Self-Perpetuating Step in Crystal Growth from the Melt. By BRUCE CHALMERS, Department of Metallurgical Engineering, University of Toronto.....                                                                                                                                                 | 686 |

|                                                                                                                                                 | Page |

| A Parabolic Law for Metal Oxidation which is not Controlled by Diffusion. By W. J. MOORE, Catholic University of America, Washington, D.C. .... | 688  |
| Gamma-Ray Angular Correlation for Proton Bombardment of Boron. By G. M. LEWIS, Department of Natural Philosophy, The University, Glasgow. ....  | 690  |
| LXVII. Notices of New Books and Periodicals received :—                                                                                         |      |
| F. C. CHAMPION and N. DAVY's Properties of Matter. ....                                                                                         | 693  |
| I. S. SOKOLNIKOFF's Tensor Analysis. ....                                                                                                       | 693  |
| W. JOST's Diffusion in Solids, Liquids and Gases. ....                                                                                          | 693  |
| M. W. THRING's The Science of Flames and Furnaces. ....                                                                                         | 694  |

## NUMBER 342—JULY

|                                                                                                                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| LXVIII. Experiments on Separation of Boundary Layers on Probes in Front of Blunt-Nosed Bodies in a Supersonic Air Stream. By W. A. MAIR, Fluid Motion Laboratory, University of Manchester. ....                                       | 695 |
| LXIX. A Heavy Particle Selector. By T. DUERDEN and B. D. HYAMS, The Physical Laboratories, University of Manchester. ....                                                                                                              | 717 |
| LXX. On a Case of Instability Produced by Rotation. By J. L. SYNGE, F.R.S., Dublin Institute for Advanced Studies. ....                                                                                                                | 724 |
| LXXI. The Abundance of Lithium, Beryllium and Boron in the Primary Cosmic Radiation. By A. D. DANTON, P. H. FOWLER and D. W. KENT, H. H. Wills Physical Laboratory, University of Bristol. ....                                        | 729 |
| LXXII. Nuclear Interactions of Great Energy : Part I. Evidence for the Creation of Heavy Mesons. By R. R. DANIEL, J. H. DAVIES, J. H. MULVEY and D. H. PERKINS, H. H. Wills Physical Laboratory, University of Bristol. ....           | 753 |
| LXXIII. The Unit Cell and Brillouin Zones of $\text{Ni}_4\text{Mn}_{11}\text{Al}_{60}$ and Related Compounds. By KEITH ROBINSON, Senior 1851 Exhibitioner, Crystallographic Laboratory, Cavendish Laboratory, Cambridge, England. .... | 775 |
| LXXIV. An Example of Multiple Meson Production. By W. BOSLEY and H. MUIRHEAD, Department of Natural Philosophy, University of Glasgow. ....                                                                                            | 783 |
| LXXV. Multiple Scattering of 0.59 mev Electrons. By E. HISDAL, Fysisk Institutt A, University in Oslo, Blindern, Norway. ....                                                                                                          | 790 |
| LXXVI. Correspondence :—                                                                                                                                                                                                               |     |
| A 'Megamolecular' Structure Factor. By DOROTHY WRINCH, Department of Physics, Smith College, Northampton, Mass., U.S.A. ....                                                                                                           | 801 |
| Quantum Hydrodynamics. By R. EISENSCHITZ, Queen Mary College, University of London. ....                                                                                                                                               | 804 |
| A Note on the Linearized Integral Equation of Green. By H. I. SCOINS, King's College, Newcastle-upon-Tyne. ....                                                                                                                        | 806 |
| Etch Spirals on a Diamond Octahedron Face. By S. TOLANSKY and M. OMAR, Royal Holloway College, Englefield Green. ....                                                                                                                  | 808 |
| LXXVII. Notices of New Books and Periodicals received :—                                                                                                                                                                               |     |
| MAX BORN's Atomic Physics. ....                                                                                                                                                                                                        | 810 |
| M. W. ZERMANSKY's Heat and Thermodynamics. ....                                                                                                                                                                                        | 810 |
| R. A. SAWYER's Experimental Spectroscopy. ....                                                                                                                                                                                         | 810 |

## NUMBER 343—AUGUST

|                                                                                                                                                                                                                                              | Page |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| LXXVIII. Simultaneous Diffusion and Reversible Chemical Reaction. By J. CRANK, Courtaulds Limited, Maidenhead, Berks. ....                                                                                                                   | 811  |
| LXXIX. Microscopic Studies on Beryl Crystals.—III. The Movement of Dislocations. By L. J. GRIFFIN, H. H. Wills Physical Laboratory, University of Bristol .....                                                                              | 827  |
| LXXX. On the Possible Relation of Galactic Radio Noise to Cosmic Rays. By G. W. HUTCHINSON, Cavendish Laboratory, Cambridge .....                                                                                                            | 847  |
| LXXXI. Further Aspects of the Trident Process. By J. E. HOOPER, D. T. KING, and A. H. MORRISH, H. H. Wills Physical Laboratory, University of Bristol .....                                                                                  | 853  |
| LXXXII. The Binding Energy of the Thomas-Fermi Atom. By J. M. C. SCOTT, Cavendish Laboratory, Cambridge .....                                                                                                                                | 859  |
| LXXXIII. A New Calculation of Some Properties of Metallic Beryllium. By B. DONOVAN, Department of Physics, The University of Sheffield .....                                                                                                 | 868  |
| LXXXIV. The Investigation of Soft Radiations from $^{239}\text{Pu}$ and $^{233}\text{U}$ with a Proportional Counter. By D. WEST, J. K. DAWSON and C. J. MANDLEBERG, Atomic Energy Research Establishment, Harwell .....                     | 875  |
| LXXXV. Theoretical Results on High Energy Nuclear Collisions in Light and Heavy Elements. By H. MESSEL and R. B. POTTS, University of Adelaide, South Australia, and C. B. A. MCCUSKER, Dublin Institute for Advanced Studies, Ireland ..... | 889  |
| LXXXVI. The Electrical Resistance of Magnesium, Aluminium, Molybdenum, Cobalt and Tungsten at Low Temperatures. By J. G. THOMAS and E. MENDOZA, H. H. Wills Physical Laboratory, University of Bristol .....                                 | 900  |
| LXXXVII. Correspondence :—                                                                                                                                                                                                                   |      |
| Ice Crystals of Spiral Form Grown from the Vapour. By B. J. MASON, Department of Meteorology, Imperial College, London, and P. G. OWSTON, I.C.I. Research Fellow, Department of Chemistry, University College, London .....                  | 911  |
| The Extra Electrical Resistance due to Cold Work and Neutron Irradiation of Platinum. By R. A. DUGDALE, Atomic Energy Research Establishment, Harwell, Didcot, Berks. ....                                                                   | 912  |
| LXXXVIII. Notices of New Books and Periodicals received :—                                                                                                                                                                                   |      |
| G. D. ROCHESTER and J. G. WILSON's Cloud Chamber Photographs of the Cosmic Radiation .....                                                                                                                                                   | 914  |
| F. E. SIMON, N. KURTI, J. F. ALLEN and K. MENDELSSOHN's Low Temperature Physics .....                                                                                                                                                        | 914  |

## NUMBER 344—SEPTEMBER

|                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| LXXXIX. On the Theory of Beta-Radioactivity. By A. M. SMITH, Department of Natural Philosophy, University of Aberdeen. ....                                     | 915 |
| XC. The Energy Distribution of Alpha-Particles emitted from Nuclear Disintegrations. By P. E. HODGSON, Imperial College of Science and Technology, London. .... | 934 |
| XCI. Some Viscous Fluid Flow Problems.—I. Jet Emerging from a Hole in a Plane Wall. By H. B. SQUIRE, Imperial College, London S.W.7. ....                       | 942 |

|                                                                                                                                                                                                           | Page |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| XCH. Heat Conductivity of Superconductive Lead below $1^{\circ}$ K. By J. L. OLSEN and C. A. RENTON, Clarendon Laboratory, Oxford.....                                                                    | 946  |
| XCIH. The Growth of Crystals of the Hexagonal Metals from their Vapours. By A. J. FORTY, H. H. WILLS Physical Laboratory, University of Bristol .....                                                     | 949  |
| XCIV. A Determination of the Doppler Effect for Gamma-Rays of 4.5 and 4.8 mev. By G. A. JONES and D. H. WILKINSON, Cavendish Laboratory, Cambridge .....                                                  | 958  |
| XCV. Energy Expenditure per Ion Pair for Electrons and $\alpha$ -particles. By J. M. VALENTINE and S. C. CURRAN, Department of Natural Philosophy, The University, Glasgow, W.2.....                      | 964  |
| XCVI. Intermolecular Force and Coefficient of Self-diffusion. By B. N. SRIVASTAVA and M. P. MADAN, Department of Physics, University of Lucknow .....                                                     | 968  |
| XCVII. Plastic Deformation Features on Cleavage Surfaces of Metal Crystals. By J. HOLDEN, Royal Holloway College, University of London.                                                                   | 976  |
| XCVIII. The Transverse Momentum Spectrum of the Decay Products of Charged $V$ -particles. By CARL M. YORK, The Physical Laboratories, University of Manchester.....                                       | 985  |
| XCIX. Correspondence :—                                                                                                                                                                                   |      |
| The Influence of Lattice Vibration Spectrum on Electronic Thermal Conductivity. By F. H. J. CORNISH, Clarendon Laboratory, Oxford, and D. K. C. MACDONALD, National Research Council, Ottawa, Canada..... | 991  |
| The Mean Energy of Three-Track Nuclear Disintegrations Produced by Cosmic-ray Particles. By D. A. TIDMAN and P. E. HODGSON, Imperial College of Science and Technology, London.....                       | 992  |
| A Note on the Measurement of Lifetime of Unstable Particles. By J. G. WILSON, The Department of Physics, University of Leeds, and C. C. BUTLER, The Physical Laboratories, University of Manchester.....  | 993  |
| Hyperfine Structure in Neodymium Ethyl Sulphate. By B. BLEANEY, H. E. D. SCOVIL and R. S. TRENAM, Clarendon Laboratory, Oxford.....                                                                       | 995  |
| On the Production of $\kappa$ -mesons. By U. HABER-SCHALM and G. YEKUTIELI, The Weizmann Institute of Science, Rehovoth, Israel .....                                                                     | 997  |
| Paramagnetic Resonance in Praseodymium Ethylsulphate. By B. BLEANEY and H. E. D. SCOVIL, Clarendon Laboratory, Oxford .....                                                                               | 999  |
| The Dispersion Formulae and the Polarization Fields. By SIR K. S. KRISHNAN, F.R.S., and S. K. ROY, The National Physical Laboratory of India, New Delhi.....                                              | 1000 |
| The x-ray Spectrum from a 70 mev Synchrotron. By I. B. MCDIARMID, Synchrotron Laboratory, Queen's University, Kingston, Ontario, Canada.....                                                              | 1003 |
| Interpretation of the de Haas-van Alphen Effect. By L. ONSAGER, The Royal Society Mond Laboratory, University of Cambridge.....                                                                           | 1006 |
| C. Notices of New Books and Periodicals received :—                                                                                                                                                       |      |
| W. J. DUNCAN'S The Principles of the Control and Stability of Aircraft.....                                                                                                                               | 1009 |

|                                                                                  | Page |
|----------------------------------------------------------------------------------|------|
| H. S. W. MASSEY and E. H. S. BURHOP's Electronic and Ionic Impact Phenomena..... | 1009 |
| E. H. S. BURHOP's The Auger Effect.....                                          | 1009 |
| F. SHERWOOD TAYLOR's The Alchemists, Founders of Modern Chemistry.....           | 1010 |
| P. JORDAN's Schwerkraft und Weltall .....                                        | 1010 |

## NUMBER 345—OCTOBER

|                                                                                                                                                                                                                            |      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| CI. The Effect of a Finite Nucleus on Beta-Decay. By I. MALCOLM, Department of Natural Philosophy, Aberdeen University.....                                                                                                | 1011 |
| CII. The Decomposition of Thin Oriented Silver Halide Layers. By D. W. PASHLEY, Imperial College, London.....                                                                                                              | 1028 |
| CIII. The Virial Theorem in the Thomas-Fermi Theory. By N. H. MARCH, Wheatstone Physics Laboratory, King's College, London.....                                                                                            | 1042 |
| CIV. On the Latent Heat and Vapour Density of Helium. By R. BERMAN and J. POULTER, The Clarendon Laboratory, Oxford.....                                                                                                   | 1047 |
| CV. The Mechanism of Rolling Friction. By D. TABOR, Research Laboratory on the Physics and Chemistry of Surfaces, Department of Physical Chemistry, Cambridge.....                                                         | 1055 |
| CVI. The Inelastic Scattering of Fast Neutrons. By M. J. POOLE, Atomic Energy Research Establishment, Harwell, Berks.....                                                                                                  | 1060 |
| CVII. The Natural Radioactivity of Rubidium. By G. M. LEWIS, Department of Natural Philosophy, The University, Glasgow.....                                                                                                | 1070 |
| CVIII. The Deformation of Silver at High Temperature. By A. P. GREENOUGH, Royal Aircraft Establishment, Farnborough, Hants.....                                                                                            | 1075 |
| CIX. The Zero Point Energy and $\Theta$ Values of Crystals. By C. DOMB and L. SALTER, Clarendon Laboratory, Oxford.....                                                                                                    | 1083 |
| CX. The Spatial Correlation of Electrons in Atoms and Molecules: II—Two-Electron Systems in Excited States. By A. BRICKSTOCK and J. A. POPLÉ, Department of Theoretical Chemistry, University of Cambridge... London ..... | 1090 |
| CXI. Two Dimensional Diffusion Phenomena in Crystal Growth from Solution. By F. S. A. SULTAN, Royal Holloway College, University of London .....                                                                           | 1099 |
| CXII. Current-Noise in Semi-Conductors: A Re-examination of Bernamont's Data. By D. A. BELL, Electrical Engineering Department, University of Birmingham .....                                                             | 1107 |
| CXIII. Notices of New Books and Periodicals received :—                                                                                                                                                                    |      |
| H. BONDI's Cosmology.....                                                                                                                                                                                                  | 1112 |
| M. VON LAUE's Theory of Superconductivity.....                                                                                                                                                                             | 1112 |
| A. R. UBBELOHDE's An Introduction to Modern Thermodynamical Principles.....                                                                                                                                                | 1113 |
| F. P. BOWDEN and A. D. YOFFE's The Initiation and Growth of Explosions in Liquids and Solids.....                                                                                                                          | 1113 |
| J. TAYLOR's Detonation in Condensed Systems.....                                                                                                                                                                           | 1113 |
| C. MØLLER's The Theory of Relativity.....                                                                                                                                                                                  | 1114 |

## NUMBER 346—NOVEMBER

|                                                                                                                                                                                                                                                                                           | Page |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| CXIV. X-ray Transition Probabilities with Special Reference to K Absorption in Lithium. By J. FRIEDEL, H. H. Wills Physical Laboratory, University of Bristol.....                                                                                                                        | 1115 |
| CXV. An Interferometric Investigation of the Abrasion Hardness Properties of Diamond. By EILEEN M. WILKS, Royal Holloway College, University of London .....                                                                                                                              | 1140 |
| CXVI. The Beta-Gamma Angular Correlation of $^{170}\text{Tm}$ . By H. ROSE, Cavendish Laboratory, Cambridge.....                                                                                                                                                                          | 1146 |
| CXVII. A Theory of Work-hardening of Metal Crystals. By N. F. MOTT, F.R.S., H. H. Wills Physical Laboratory, University of Bristol ..                                                                                                                                                     | 1151 |
| CXVIII. The Propagation of a Radio Atmospheric—II. By K. G. BUDDEN, Cavendish Laboratory, Cambridge.....                                                                                                                                                                                  | 1179 |
| CXIX. The Mean Lifetime and Frequency of Production of Charged $V$ -Particles. By K. H. BARKER, C. C. BUTLER, M. G. SOWERBY and C. M. YORK, The Physical Laboratories, University of Manchester.....                                                                                      | 1201 |
| CXX. Screw Dislocations, Etch Figures, and Holes. By F. HUBBARD HORN, General Electric Research Laboratory, Schenectady, New York...                                                                                                                                                      | 1210 |
| CXXI. Correspondence :—                                                                                                                                                                                                                                                                   |      |
| Angular Correlations in the Reaction $^{15}\text{N}(p, \alpha\gamma)^{12}\text{C}$ . By J. SEED and A. P. FRENCH, Cavendish Laboratory, Cambridge .....                                                                                                                                   | 1214 |
| An Effect of Electron Bombardment on Order in $\text{Cu}_3\text{Au}$ . By J. ADAM, A. GREEN and R. A. DUGDALE, Atomic Energy Research Establishment, Harwell, Berks.....                                                                                                                  | 1216 |
| Critical Shear Stress and Temperature. By E. N. DA C. ANDRADE, F.R.S. ....                                                                                                                                                                                                                | 1218 |
| The Sintering of Powders and Diffusion. By R. S. BARNES, Atomic Energy Research Establishment, Harwell .....                                                                                                                                                                              | 1221 |
| The Temperature Variation of the Thermodynamic Potential of a Degenerate Electron Gas. By Sir K. S. KRISHNAN, F.R.S., National Physical Laboratory of India, New Delhi, and P. G. KLEMENS, Division of Physics, Commonwealth Scientific and Industrial Research Organization, Sydney..... | 1224 |
| CXXII. Notices of New Books and Periodicals received :—                                                                                                                                                                                                                                   |      |
| ALBERT G. A. BALZ's Descartes and the Modern Mind ....                                                                                                                                                                                                                                    | 1226 |
| Erratum .....                                                                                                                                                                                                                                                                             | 1226 |

## NUMBER 347—DECEMBER

|                                                                                                                                                                                  |      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| CXXIII. Some Properties of Lines on Divergent-beam X-ray Photographs. By A. G. PEACE and G. E. PRINGLE, Department of Inorganic and Physical Chemistry, University of Leeds..... | 1227 |
| CXXIV. Programming a Digital Computer to Learn. By ANTHONY G. OETTINGER, University Mathematical Laboratory, Cambridge.....                                                      | 1243 |
| CXXV. On the Destruction of Superconductivity by Large Currents. By C. G. KUPER, Royal Society Mond Laboratory, Cambridge.....                                                   | 1264 |
| CXXVI. On the Born-Green Theory of Binary Mixtures. By G. S. RUSHBROOKE, King's College, Newcastle. University of Durham.....                                                    | 1276 |

|                                                                                                                                                                                                                 | Page |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| CXXVII. On the Decay of Charged $V$ -particles. By J. P. ASTBURY, P. CHIPPINDALE, D. D. MILLAR, J. A. NEWTH, D. I. PAGE, A. RYTZ and A. B. SAHAR, The Physical Laboratories, University of Manchester . . . . . | 1283 |
| CXXVIII. Investigations on Positron-Electron Scattering. By R. R. ROY and L. GROVEN, Université Libre de Bruxelles, Laboratoire de Physique, Bruxelles . . . . .                                                | 1291 |
| CXXIX. The Alignment of Cobalt 58. By J. M. DANIELS, M. A. GRACE, H. HALBAN, N. KURTI and F. N. H. ROBINSON, Clarendon Laboratory, Oxford . . . . .                                                             | 1297 |
| CXXX. The Effect of Mechanical Deformation on the Growth of Cadmium Iodide Crystals from Solution. By A. KORNDORFFER, H. RAHBEK and F. S. A. SULTAN, Royal Holloway College, Egham, Surrey . . . . .            | 1301 |
| CXXXI. Film Flow and the Behaviour of He Cryostats below the $\lambda$ -Point. By E. AMBLER and N. KURTI, Clarendon Laboratory, Oxford . . . . .                                                                | 1307 |
| CXXXII. The Thermal Instability of a Fluid Sphere Heated Within. By S. CHANDRASEKHAR, F.R.S., Yerkes Observatory, University of Chicago . . . . .                                                               | 1317 |
| CXXXIII. Magnetic Moments and Quadrupole Moments of Odd-mass Nuclei in $jj$ -Coupling. By B. H. FLOWERS, Department of Mathematical Physics, The University, Birmingham . . . . .                               | 1330 |
| CXXXIV. Correspondence :—                                                                                                                                                                                       |      |
| A Counter-Hodoscope Study of Associated Penetrating Particles Underground. By B. LEONTIC and A. W. WOLFENDALE, The Physical Laboratory, University of Manchester . . . . .                                      | 1335 |
| The Existence of a Macroscopic Shear in the Transformation in Cobalt. By T. R. ANANTHARAMAN and J. W. CHRISTIAN, The Inorganic Chemistry Laboratory, Oxford . . . . .                                           | 1338 |
| Note on Thermal Radiation at Low Temperatures. By D. BIJL, Clarendon Laboratory, Oxford . . . . .                                                                                                               | 1342 |
| Index to Volume . . . . .                                                                                                                                                                                       | 1345 |

## PLATES

- I.-IV. Illustrative of A. J. FORTY's Paper on the Growth of Cadmium Iodide Crystals.—Part I. Dislocations and Spiral Growth.
- V. & VI. Illustrative of W. O. LOCK and G. YEKUTIELI's Paper on the Interaction of Fast  $\pi$ -Mesons with Nuclei.
- VII. & VIII. Illustrative of H. W. PAXTON, M. A. ADAMS and T. B. MASSALSKI's Correspondence on Some Observations on Slip Lines in Iron.
- IX. & X. Illustrative of O. BARDSLEY and W. A. MAIR's Paper on the Separation of the Boundary Layer at a Slightly Blunt Leading Edge in Supersonic Flow.
- XI. & XII. Illustrative of A. J. FORTY's Paper on the Growth of Cadmium Iodide Crystals.—Part II. A Study of the Heights of Growth Steps on Cadmium Iodide.
- XIII.-XV. Illustrative of P. G. F. CATON and E. T. PIERCE's Paper on the Waveforms of Atmospherics.
- XVI. & XVII. Illustrative of S. TOLANSKY and D. G. NICKOLS's Paper on Interferometric Studies of Hardness Test Indentations: Investigations on Tungsten Carbide, Steel, Duraluminium and Tin.
- XVIII.-XX. Illustrative of AJIT RAM VERMA's Paper on Further Observations of Growth Patterns on Silicon Carbide (Si-C) Crystals.
- XXI. Illustrative of A. J. FORTY's Correspondence on Growth Spirals on Magnesium Crystals.
- XXII. Illustrative of S. C. HUNTER and F. R. N. NABARRO's Paper on the Origin of Glauert's Superposition Fringes.
- XXIII. Illustrative of S. TOLANSKY and F. S. A. SULTAN's Paper on an Unusual Birefringence Interference Pattern.
- XXIV. Illustrative of S. AMELINCKX's Paper on Growth Spirals Originating from Screw Dislocations on Gold Crystals.
- XXV. & XXVI. Illustrative of N. H. JOHANNESSEN's Paper on Experiments on Two-dimensional Supersonic Flow in Corners and over Concave Surfaces.
- XXVII. Illustrative of A. J. HERZ and C. WALLER's Correspondence on a Nuclear Research Emulsion.
- XXVIII.-XXXI. Illustrative of R. ARMENTEROS, K. H. BARKER, C. C. BUTLER, A. CACHON and C. M. YORK's Paper on the Properties of Charged V-particles.
- XXXII. & XXXIII. Illustrative of D. KUHLMANN-WILSDORF, J. H. VAN DER MERWE and H. WILSDORF's Paper on Elementary Structure and Slip Band Formation in Aluminium.
- XXXIV. & XXXV. Illustrative of R. I. GARROD, J. W. SUITER and W. A. WOOD's Paper on an Electron-Microscope. Study of the Effect of Temperature and Strain-rate on the Mechanism of Deformation of Aluminium.

- XXXVI.—XLI. Illustrative of W. A. MAIR's Paper on Experiments on Separation of Boundary Layers on Probes in Front of Blunt-Nosed Bodies in a Supersonic Air Stream.
- XLII. & XLIII. Illustrative of T. DUERDEN and B. D. HYAM's Paper on a Heavy Particle Selector.
- XLIV.—XLVII. Illustrative of A. D. DAINTON, P. H. FOWLER and D. W. KENT's Paper on the Abundance of Lithium, Beryllium and Boron in the Primary Cosmic Radiation.
- XLVIII.—LI. Illustrative of R. R. DANIEL, J. H. DAVIES, J. H. MULVEY and D. H. PERKINS's Paper on Nuclear Interactions of Great Energy.—Part I. Evidence for the Creation of Heavy Mesons.
- LII. Illustrative of W. BOSLEY and H. MUIRHEAD's Paper on an Example of Multiple Meson Production.
- LIII. Illustrative of S. TOLANSKY and M. OMAR's Correspondence on Etch Spirals on a Diamond Octahedron Face.
- LIV.—LIX. Illustrative of L. J. GRIFFIN's Paper on Microscopic Studies on Beryl Crystals.—Part III. The Movement of Dislocations.
- LX. Illustrative of B. J. MASON and P. G. OWSTON's Correspondence on Ice Crystals of Spiral Form Grown from the Vapour.
- LXI.—LXIV. Illustrative of A. J. FORTY's Paper on the Growth of Crystals of the Hexagonal Metals from their Vapours.
- LXV.—LXVII. Illustrative of J. HOLDEN's Paper on Plastic Deformation Features on Cleavage Surfaces of Metal Crystals.
- LXVIII. Illustrative of D. W. PASHLEY's Paper on the Decomposition of Thin Oriented Silver Halide Layers.
- LXIX. & LXX. Illustrative of A. P. GREENOUGH's Paper on the Deformation of Silver at High Temperature.
- LXXI. Illustrative of F. S. A. SULTAN's Paper on Two-Dimensional Diffusion Phenomena in Crystal Growth from Solution.
- LXXII. Illustrative of EILEEN M. WILKS's Paper on an Interferometric Investigation of the Abrasion Hardness Properties of Diamond.
- LXXIII.—LXXVII. Illustrative of F. HUBBARD HORN's Paper on Screw Dislocations, Etch Figures, and Holes.
- LXXVIII. & LXXIX. Illustrative of J. P. ASTBURY, P. CHIPPINDALE, D. D. MILLAR, J. A. NEWTH, D. I. PAGE, A. RYTZ and A. B. SAHAR's Paper on the Decay of Charged V-particles.
- LXXX.—LXXXIII. Illustrative of A. KORNDORFFER, H. RAHBEK and F. S. A. SULTAN's Paper on the Effect of Mechanical Deformation on the Growth of Cadmium Iodide Crystals from Solution.
